Abstract- Hydrogen mapping is important to better understand and implement more effective ways of energy generation processes. The hydrogen pockets in the map suggest the process in which hydrogen enhance its energy and this process can be used in technical engineering processes, whether chemically or mechanically. The biggest challenge is that our environment does not have ready access to the zero level where hydrogen exists as an atom to continuously charge the mapping process. However, there are other methods that can be employed to achieve highly competitive results following the methods of hydrogen mapping. The process of hydrogen mapping starts from level zero to level ten. The results at level ten are an enhanced hydrogen pack that is able to exist alongside the zero levels of hydrogen without destabilizing. During the mapping of hydrogen it becomes clear that the first balanced and free hydrogen pack exist at the solar level, the second one is at the galactic level and the third one is at the universal level. The theoretical presentation in this paper only covers the map up to the solar level. It then becomes clear that everything that exist is beyond zero, if it wasn't, hydrogen atoms would form part of the environment we know and sparks of energy would be created from the atmosphere everywhere. Hydrogen creates its energy by totally focusing on enhancing its core and this results into a magnetic energy that pulls strongly towards its core. Hence everything in existence is pulled towards this core with a spherical shape in the center.

I. INTRODUCTION

Hydrogen as an element has a map that is expressed throughout the entire universal system that we live in. Herein is the map of hydrogen from level zero to level five, a level of the solar system in existence. Hydrogen continuously enhance itself through work so that it can balance and free itself from its most unstable state. The enhanced form of hydrogen that is mapped herein becomes the zero points for existence itself. Everything in existence is created around the enhanced form of hydrogen that is highly magnetic and become the central force of attraction in existence because everything is drawn towards this central point.

The entire map of hydrogen follows a set of rules that guides the continuous enhancement of hydrogen in existence. The first law is a law of potential and this is where the hydrogen atom is found at level zero. At level zero, there is no work done yet and therefore there is no energy, the level produces no sound and has no light. All these things are a potential at this point carried by hydrogen as an atom. The instability of the hydrogen atom result from its continuous effort to express its potential. Resulting to a breakthrough that happens when hydrogen finally breaks itself up to release its potential. The breakthrough immediately leads to level one of the hydrogen element, where hydrogen starts to focus on itself. This focus is considered to be work, work that enhances hydrogen's potential to higher levels of energy, sound and light

intensity. When hydrogen focuses on its core, it enhances magnetic energy that pulls everything in that level of existence towards that enhanced core of hydrogen. From the breakthrough, hydrogen expresses itself as the outcome of the work done at level one. The level of work employs the law of work and the level of discovery uses the law of discovery. Everything discovered must be studied and hydrogen found itself to lack balance at this level. Further continuing to the level of support where hydrogen gains support from its base hydrogen at level zero. This support allows hydrogen to work on its mirror image without losing its previous enhancement.

The law of support at level three makes it possible for hydrogen to proceed to its balanced state at level four. The balanced form of hydrogen is highly energetic, illumined with varying decibel levels. This is the self-sufficient form of hydrogen, however, it must first break free from the bond it has with its base hydrogen to become free. At level five balanced hydrogen breaks free from its base hydrogen and becomes free hydrogen.

The entire outcome of enhanced hydrogen is also depicted in the hydrogen table and this whole work herein only goes to the level of the solar system. Hydrogen can be mapped through into galactic levels and thereafter into the universal level where hydrogen mapping will be fulfilled and then hydrogen multiplication begins.

hydrogen laws

II. HYDROGEN POTENTIAL

Hydrogen is based on potential that continuously need to be expressed and this potential is capable of communicating and working. Nothing can be added or taken away from hydrogen as it has dedicated principles to fulfill its potential through enhancement and multiplication. The potential of hydrogen continuously need to discover and express itself. It carries the potential of sound, work, light and energy, the work splits hydrogen into a neutron and a proton which result into sound and light.

Figure 1. The hydrogen potential

Hydrogen potential = 4

1. Work
2. Sound
3. Energy
4. Light

At this level Hydrogen equals four ($H = 4$), the potential of Hydrogen is work that produces sound, energy and light (H^+ and H^-). Therefore at level zero ($H = 1$), -meaning zero carries the potential to create charged energy levels. It is therefore the only level that seem tricky to understand because it remains the potential for every other energy level to be expressed.

The 1st law of hydrogen: *Every Hydrogen atom carries the potential to work, release sound, light and enhance itself into energy.*

$H = 4$ shows that Hydrogen atoms unstable nature is caused by its potential to express itself, However this potential of hydrogen only exist at level zero. Level zero is the only point where there is no work, no sound and no energy, clarifying the fact that the hydrogen atom cannot be found at any other level but zero.

III. HYDROGEN BREAKTHROUGH

Hydrogen works first to enhance itself and during work, sound, light and energy is released. The working of hydrogen is the first step towards unleashing the full potential of hydrogen. So, $H = H_1 - 1$, the minus one means one is deducted from the base of the hydrogen atom's potential at level zero to enhance the expression of hydrogen at the first energy level. H_1 is a representation of hydrogen beyond the potential level. A Hydrogen atom breaks itself into half (H^+ and H^-) so that it can focus on expressing itself (H_1).

For example: where $H = H_1 - 1$, H_1 is being enhanced by the breakdown of hydrogen which is considered a breakthrough in hydrogen mapping. The breakdown of H into H^+ and H^- result into H^0 which is = 1. So this 1 focuses on the hydrogen (H_1) and enhances its energy going forward. This is how hydrogen works and express itself in the first energy level. So this energy level is based on work towards discovering a much more stable and balanced form of hydrogen.

Figure 2: Working of hydrogen

Where work equals one, $H = H_1 - 1$, because the very expression of work comes from the potential of hydrogen. Hydrogen works as it breaks itself down and focus more on itself. The work of hydrogen creates a system.

Figure 3: Hydrogen system at level 1

The split of hydrogen forms a system where it is able to focus on its core, a single hydrogen atom enhance it to a complete balanced state. This focus creates a magnetic force that pulls the system towards its core, thereby resulting on a strong magnetic field safe guarding the system.

The 2nd law of hydrogen: *Hydrogen is the force doing work every time it potentially breakthrough.*

The first law proves the creative ability of hydrogen is based on energy that is sourced from the enhancement of hydrogen itself during work. The energy field protecting the hydrogen system is a source of magnetic energy resulting from hydrogen work.

IV. HYDROGEN DISCOVERY

Work leads to a discovery, a discovery that seeks to fulfill the need that was buried as potential to work because for the first time hydrogen has found itself in existence. For the first time at this level, existence has something to give back to the hydrogen atom for the whole work well done.

Figure 4: The discovery

It's time for this enhanced discovered hydrogen to give back to the Hydrogen at level zero and it can only give back in the way it received, $H = H_1 + 1$. Thus at this point Hydrogen is, $H = (H_1 - 1) + (H_1 + 1)$ resulting onto $H = 2H_1$, so this is how creation found itself to be in existence. $H = (H_1 - 1)$, this was the breakthrough and $H = (H_1 + 1)$ is the contribution back to the core.

Figure 4; Discovery of enhanced hydrogen

Hydrogen has now successfully enhanced itself from H to $2H_1$. The work and the discovery point of enhanced hydrogen start to show a workable map that can be followed to understand the creativity of hydrogen. Enhanced hydrogen grows its magnetic field and strengthens its energy field. However, this level of enhanced hydrogen is not balanced and more work must be done to reach a balanced state.

Figure 5: Discovery systems

The 3rd law of Hydrogen: *For every work done, hydrogen is enhanced. The enhanced core equals the product of the work done.*

$H = H_1 - 1$ is always the input from the base hydrogen and $H = H_1 + 1$ is contribution towards the base hydrogen. Hydrogen is proving to be self-sufficient and this allows it to continue enhancing itself to levels where it becomes free hydrogen.

V. HYDROGEN SUPPORT

Upon discovering itself, hydrogen continues to be unfulfilled as it need to balance and gain its mirror image view. The work required for hydrogen to balance itself equals the work already done to discover it. However, hydrogen must support its discovery so that it can continue work and discover itself exactly the way it did before. So during the discovery of its mirror image, level zero provides total support for the already existing part of hydrogen discovered through enhancement work. Therefore, the discovery plus the potential come together temporarily. This enables hydrogen to work on itself again and advance to its fully independent state.

Figure 6: Total support (support in red)

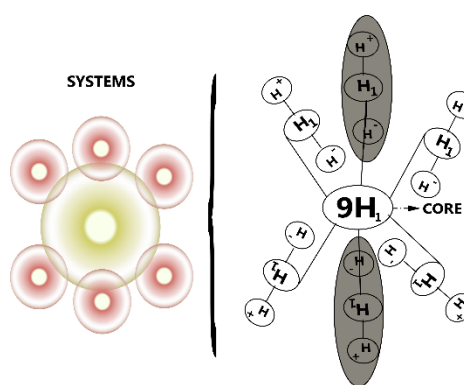

Hydrogen support itself in this way so that it can continue working and enhancing itself. So the coming together of $H = 4$ and $H = 2H_1$ gives $H = 2H_1 - 4$, clearly representing the discovery with total support from level zero. The existing discovery receives total support because it worked and fulfilled the potential by giving back completely what it received. Now the discovery is totally capable of finding itself and balancing itself as it fuses its work resulting on $H = H_1^2$. So this zero point of total support is not the

one creating but the discovery continues in a quest to fulfill the potential already known from zero.

The work of hydrogen is always one and it produces energy that is H_1 , this energy is always focused on enhancing its core. So, Hydrogen equals work multiply by two energy system focusing on a specific core. Thus $H = 1(H_1 \times H_1)$ resulting on $H = H_1^2$. The same applies during support enhancing the discovered hydrogen to a new level of expression.

Figure 7: Support systems (support in grey)

The 4th law of hydrogen: *for every enhanced discovery of hydrogen, equal and total support is provided by the base hydrogen.*

This is how progress is gained through enhancement as hydrogen only concerns itself with progress, vital progress does not consume its own work. Support therefore exists for all enhanced discoveries to continue working and contributing to the hydrogen map.

VI. HYDROGEN BALANCE

At this point hydrogen has discovered its enhanced version twice, suggesting that it has achieved its mirror image and therefore aware of itself. The potential is now expressed twice and enhanced hydrogen has given back to the base hydrogen twice. It is a point of balance as every action has been totally reacted upon with equal force.

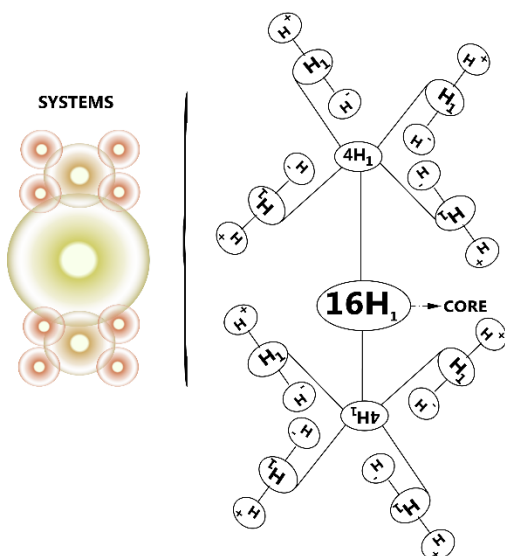

The total work done by hydrogen: Before support, the discovery of enhanced hydrogen was found to be $H = 2H_1$ and during support, the discovery of enhanced hydrogen is again achieved through work and it is $H = 2H_1$, so now the union of the two enhanced discoveries is $H = 4H_1$. This comes from, $H = (H_1 - 1) + (H_1 + 1)$ before support and $H = (H_1 - 1) + (H_1 + 1)$ during support resulting on $H = (H_1 - 1) + (H_1 + 1) + (H_1 - 1) + (H_1 + 1)$ which gives $H = 4H_1$.

Figure 8: Balanced hydrogen

A system of balanced hydrogen shows the exact map of enhanced hydrogen packets.

Figure 9: Balanced system
 INSIDE SYSTEM

The 5th law of hydrogen: Balance can only be achieved through work and work done with the total support of the hydrogen base.

For the very first time enhanced hydrogen has created a totally balanced system for H₁ to thrive.

VII. FREE HYDROGEN

The entire work began because hydrogen needed to balance and liberate itself. It achieves balance through focused enhancement work.

Therefore $H = 4H_1 + 4$ (where $4 = H$), Then $H = 4H_1 + H$ meaning $4H_1 = H - H$ and thus $4H_1 = 0$. This means enhanced hydrogen can now exist side by side with the hydrogen base at level zero as free hydrogen. It is therefore clear that hydrogen seeks to balance itself so that it can be free.

The 6th law of hydrogen: Hydrogen can only be free through work and support and free hydrogen is total energy.

HYDROGEN TABLE

The table of hydrogen herein shows hydrogen from level zero where only the hydrogen atom exist up to level five, a point

where free and enhanced hydrogen exist. At level zero, only the hydrogen atom exist and it breaks through at level one to start focusing on itself. Level two shows the growth and enhancement of hydrogen from level 1 and the flow of hydrogen breakthrough continues work to enhance itself. Level three supports level two so that an enhanced balanced level of hydrogen can be achieved. Level four expresses the balance form of enhanced hydrogen and this form of hydrogen continues to level five where it becomes free. Free hydrogen is able to thrive side by side with level zero of hydrogen atoms without reacting or consuming itself. Further growth is triggered when free hydrogen ventures further, a need will arise again for hydrogen to further its work and enhance itself towards a more enhanced and stable hydrogen to withstand its surrounding environment.
