**Abstract-** The ode to childhood, the children first school is at home, everybody smile and love at the innocent face that reflect tension free and cry out only during the child stomach is empty and had sickness or aggravation. Children are incorruptible and innocent and honest as his wheel of development. A good wife will mould up and make a child grow up and get respect for both husband and wife. Childhood say from class KG to Class five. These childhood stage in a play attitude and are of enthusiastic type and they give less attention to their studies nevertheless private tuition or mother has to spare sufficient time to household chorus along with eye on children, finding out time and energy, sitting together and solving mathematics and statistics together make a good mother. A good woman are those who makes the crown of her husband along with making children submissive. Together the child must be sticky toward parent. We should ensure and make time table for daily activity. Child must know the timing of study and reduce time for playing viz. football and volleyball. The taste, likeness, and preference of the children calibre, intelligent, strength and with the parent presenting the role of indifference curve in consumer theory (ordinal theory using IC). The indifference curve approach can be applied physically to child centric norm. Make their ward be loved by all teachers. Parent should love all children equally but some family say A, B, C, & D (all capital letter represented Individual family).

For instance 'A' family got six children the eldest boy was love both by parent. For others children less carefulness and are of looking after their future career and let them go and easy and at freewill, these 5 children needs equal attention as the support get by the eldest and are in secondary activities. Students must respect their teachers in the college premises (compound) or city where they are passing by because student are getting the knowledge and wisdom, creating you to become some big persons getting white collar jobs in their life 'child future lies on what sort of work (activity) you do today at home teachers and parent are solely responsible why student drop out and there is no seriousness in study as a consequence. The children when workforce needed them they are unprepared, unskilled and out of the jobs market. This lead to vicious and virtuous cycle of unemployment. Which means everyone future depends on how much we work today accompanied by hard work now; will pay as back when we

becomes old and helpless to the point we can't stand up and goes for nature's cool (Number one and Two.....etc., and also for food and drink we must feed them since their hand incision and sacking ). Absence mindedness. Liking all eatables that are like by Children. They should know that "the fear of the teacher and respect for teacher invites teachers try to put his interest on which he is supposed to do. With full vigour is the beginning of acquiring knowledge and wisdom by students from his teacher." And later realise when someday they become teacher. We should never forget that acquiring know is an unending process.

Knowledge and wisdom, we need wealth like money, property, capital, tool, and machinery.

The life of children studying nursery, KG-1, KG-2 and class 1 and 2 etc. when the child grows up and at the level of class 5 and class 6. The mom centric child will go in love father and the true father teach them at home, get private tuition, and work day in and day to sponsor their ward and to study and become a good and better citizen. To find a source of money for a farmer, it depends on Cereals and Rabi crops, Horticulture crops, Commercial crops and Spice crops. For some tea plantation, keeping fisheries farm, Naspoti farm, orange firm, piggery etc. Some striking lucky people got government jobs like lower primary teacher, upper primary teacher and teacher in Government High School. For unlucky few they get low profile jobs like peon, sweeper, cook, watchmen, lower division clerk and upper division clerk. Apart from this. Some are in Assam regiment, CRPF, Central Reserve Police Force. Children are like creamy layer of the sweet cakes and honey. Everyone admire children there are no racial discrimination of caste and creed. In respect of children. In Holy Bible Jesus openly said that heaven or his kingdom belong to their sinless nature and innocent look and graciousness. He prayed and blessed little children who comes to him. Child and ageing people need our action without our protection they might have loose living (Child labour and old age home) where they are dreaming about their home.

**Index Terms-** Innocent, discrimination, Aggravation, virtuous, centric, wisdom, ode, graciousness

## I. INTRODUCTION

The impact and role of good parenting become true and last long with regard to honesty, discipline, respect to elder, and be humble even when we are right, for this world is a risky and nasty world. We should try to negotiate the divergent views between husband and wife and try not to argue when children are at home. A worldwide issues such as climatic condition, weather deteriorating, global crisis viz. carbon dioxide concentration increasing humidity of the planet earth, scarcity of fresh water etc. Child are sweet and soft like red roses, they are like tender buds of trees and flowers, lovable and affectionate. We as a parent should guide and teach our ward to be religious, hardworking and to be soft spoken. It is our moral duty to make them walk on the right tract. Precaution should be taken when children are scolded at breakfast time, meal and dinner. They walk away without full stomach and they will have bitterness over their parents and at times reflect on the past, children sometime may feel that my parents does not love me. While eating we must eat like a king without scolding.

We must make them happy before setting out for school like putting up uniform, necktie, soak and shoe etc. we must hundred per cent worth to prove that children know how to respect their teachers and put in full vigour towards acquiring knowledge, they should never compromised with learning videos games and gossiping inside the class. We should see to it that they never feel hungry and fell on the way. After marriage the work entrusted to parents by God is to set the sons and daughters on the right tract. We speak lovingly to them in all circumstance as much as we can so that when we grow old they will take care of us hopefully when we grow old being at the service of daughter-in-law. It is universal law that ageing people are transforming themselves toward nether (Heaven) the old aged peoples are dependence variable. The appearance of ageing people wrinkle everywhere, some of them stoop, absent mindedness and difficulties in moving around for nature cold sometimes, and old aged people use walking stick.<sup>11</sup>The parenting role of daddy and mummy can be broadly look in three phases in an economic environment with connection to children transformation. Self-Esteem: when children put himself economical used of scare resources' and respect other using especially renewable and non - renewable resources, flora and fauna should be utilised after thinking properly in order to save global warming and climate change. Then the environmental degradation would be improved by our action. All this environmental programme will take us back to live a gentle life we underwent and gain the respect from others, for instance noise pollution drive slow but some teenage or youngstar drive in the city heart with full gear while starting and trying to overtake others. We should try to become an ideal and good citizen. Secondly, Life-sustenance: - All the parent's should ensure that there is enough shelter, protection, food and green leafy vegetable to make our body healthy and robust (well-build). The children should never remain without food, as of now smart phone, Two wheelers are the need of the contemporary days. Children dropout rate need to be looked into and reduced by imparting good education. Lastly, freedom from servitude and child labour should be done away with it. Since they will become the pillars of our great nation someday they would bear the responsibility and put in their own soldier to bring about a respectable country by other nations. By any mean we cannot become servant despite of

problems such as poverty, inequality, Dogmatism (mine is right principle policy) should compromised for the good of all). Summing up 'Beauty lies in the eye of the beholder'. So the honour, status and dignity of a family lies much on the activity of the parents. The Govt. of India try to go for two child norm and try to give all out security, many reforms were made for girls child in India and women empowerment issues. In India there is marvellous growth in science and technology that is why death rate during child birth is minimum. This tendency make second largest in demography structure of the country. There is a provision in constitution of our country that all children upto 14 years should be given free education incomplete mission in rural India but may be true in cities or town. In connection to free education, JawaharNavVidyalaya is one where all the student are given residential and well train like Train Graduate Teacher(TGT) and PGT(post graduate teacher, B.ed, M.ed are recruited. This JNV impart free education to those poor who are people in the country. A child and teenage should never enter the work force if they are not train and without minimum level such as class ten or twelve. When this minimum degrees are well maintain dropout rate declined and will give good incentive to growth of a nation. If dropout rate are more there will be more crimes, stealing and dacoit. Why? because after getting married having wife and children they are helpless to manage the household they will go to any extreme. These problems can be sorted out with minimum level of education so that a person find job in primary sector, secondary sector and tertiary sector.

The ageing of Humanities, every one of us getting in Jobs market but after a short while when we advance in age and time to get out and remain physical productivity. Yet it is good to live with them for they can lead us in pain and happiness. Let us consider ageing started from 70 yrson average. Supposed in a village with 600 households if we can have old age people such as 50 above and Below the villages will remain warm and very cool. Because each of this have a story to told us because their life journal is long. Suppose, prior to Indian Independence. The wage rate for policeman is just RS 40 to Rs 60 as per some elderly reports. This old aged people know the village boundary. When the village face chaos, bloodshed, Village Authority whose number comprise of all that old aged people. They are like egg where the White outer layer protect albumen and York. When somebody retired from service or become old how their contribution towards peace and harmony, progress and prosperity in the economy. They will act as nature advice to turmoil and disturbing area by asking the younger generation never to go for extreme form of agitation and our action that was planned should be based on humanitarian ground and hospitality is the need in our country despite of so many reeling or changing phrases of life in urban and rural. Some people keep grandpa and grandpa into old age home. If we can remain separate it is a sign that our love for them is so little for them. The path of such things will be equally done to us by our children too. When we feed them 10 spoonful of rice and give them good food such as chicken, meat and whatever etc. They will bless their nephew, niece and the father and mother of family. In such activities God will bless in one angle that whoever son and daughter are bless and prayed for them with sincere heart. The Heavenly Father will bless like wise. For instance humankind such as grandpa, Grandma, father, mother, brother, sister, nephew, niece etc. When ageing took place he becomes like child once

again he would love to eat sweets e.g. such as sweets, meat, help him out to go for nature's cold will be full of wrinkles, bend and need tender care. His bed sheet, quilt, blanket and pillow covered etc. should be clean by the daughter in law. The best place for ageing is at home, looking at the nephew and niece playing and support and care given to grandpa and grandma in the long run bring about happiness and God's mercy and his blessing comes like a shower in the bath tub or at the rainy. Both children and old aged people are dependent, to his son or daughter in law.<sup>iii</sup>The seven status as given by Shakespeare are mentioned below: -Infancy, School goer (boy), teenage, young man, middle age old age and Death.

NITI Aayog launched in 2012 replacing five year plan under the leadership of the then Prime Minister Modi and his cabinet minister sitting on their berth. They also throw enough onlooker since it is vital reports on health care and sanitation, the thrust areas: -It focuses on health system for new India, building blocks, potential pathways to reform (the way how government will make an investment or spend its public coffers (treasury) for the benefit of all citizens holding the relationship of NITI Aayog). On the day of release of health reports Mr. Vice-Chairman (vice-Chairman of NITI Aayog) Mr. Bill Gates and his wife were present. Policy makers from academia, national and international think tank released the NITI Aayog reports. These programmes are so far so good.

Children have a connectivity to ward all aged people, in a colony or ward when problems cope up because of shortage of water and electricity for instance. In the past people preferred for large families due to backwardness of medical science, tools and equipment's. And parents are scared that some children may not live long. Now in this 22nd century medical science is so developed that all diseases can be treated, all internal parts and organs can be removed and made like that of original parts. In such a state people feel happy to go for 2 child norm. We can refer in the context of William Shakespeare, seven stages of life.

And from the Robert Malthus, the food production grows at a reckoning such as 1, 2, 3, 4...n times whereas the population growth is in geometric progression. Such as  $1^1, 2^2, 3^3, 4^4, \dots, N^N$ . Robert Malthus knew very well that even if the goods services are productive, say our GDP (Gross National Income) rises to 9 percent for instance the population of a country crops up and the GDP seem like increasing but not at all. He was little classic as of now after green revolution e.i. food grain in India comes out in such a huge amount that can feed the citizen. The main behind HYV is non-other than K.S. Viswaskanan

The children and old aged people free from doing hard work like that of shaktiman driver, working in saw mill and working in fire service and water service. They don't have the strength left to beat back the waves and tides of seas and ocean. Children are dependable variables and so do old age people are another like children. My motive behind abortion is that lets us all ponder over God's greatest gift is Human. I feel in truth and spirit the may be children's free constitution free education should be meted out to those who are under  $0 < 14$ , greater than zero and less than 14 years. In India girl children are less while compare to boy. The bridegroom have to meet heavy marriage expenditure. Still some orthodox and rigid stand people demand money and wealth time and again when husband's love turn into anger as "anger is madness" the white sheep were slain just for money. Money can

be earned but life can be given back with our father who is, who was, and will be eternally.

<sup>iv</sup>The input and output theory of matrix determination can be used to compare children, work force and ageing.

$$C_1x + C_2y + C_3z = D_1$$

$$W_1x + W_2y + W_3z = D_2$$

$$A_1x + A_2y + A_3z = D_3$$

A third order of matrix lies constant term along with x, y, z equal D1, D2 and D3.

Technically speaking LHS = RHS. It is appropriate to find out all values of x, y, and z. The solution may be x greater than y and y greater than z. The best solution for this is, work force are greater than children and together with old age people. Ageing is something that will never pass away from somebody's life. Due to Ageing the Vibrant Youth might overestimate the strength of old people. The old ageing people can be a gardener, going around the world, spending their time smoothly in some tourists sport. Child labour is ban in our country India. Nevertheless the need of the Brahmin, high castes people and Rich people alike. As seen in the times of Moses and Aaron to be picked out from the slavery of Egyptian. Children are honest, sincere, and innocent there is no jealousy, there is no hatred and every childhood is a cheerful giver. They bring in and out smiles in everyone's faces. If the parent can identify the right decision counselling the child in his ability and capability and his preference and liking for example a child was playing a guitar from his friend send the child in that pursuit, but if parent buy cricket bat and cricket ball. The child may not do very well in cricket but he may be given guitar. The bright side of ageing is no climax on driving, taking tea and coffee at times. They are enjoying leisure; each day they are stepping towards their tomb. The economic resources are consumed in a less quantity. It may be flora and fauna, forest resources, water resources, and non-renewable in such life cycle journey ageing are more than products, goods and service. The medical science extends the death rates bring up to 90 year to 120 years of living on average.

<sup>v</sup>Because of the development of the ministers' who are more sincere and transparent in dealing with social welfare bring about changes in the economy. Does not pin uneasy educated flock when science can fully ensure the life of what can else can we think off because of this logic nuclear highly dependent. Due to the growth of Administrative which comprises of Birth and Death records, pensions, tax records, Marriage record etc. the child ratio to workforces should be to the minimum because they are our future pillar and citizen of near future on earth. With the journey for woman in India, their life are affected in north, south, east and West. Women is just a productive machine. Gone are those days and "betiparaobetibachoa" is the slogan. In the midst of this purda system, satidah, and dowry system slowly and gradually untouchable scenario are declining.

Survey Data is the primary source of collecting by sending correspondent or the research himself take a friend and go to sample villages from respective villages. Questionnaire contain introduction of sample survey to arouse the feeling of proper respond. I've visited eight villages from Tamenglong, Nungba, Taosemand Tamei. My whole survey compare and contrast the role of horticulture and the weight of doing jhum or Wet Cultivation. The commercial crops and horticulture is more provoking and wealth earning activity. After I made statistical

analysis 95 level of my research objective is full filled. Only 5% is redundant or making an error. As mentioned above Ministry of Health and Familiar Welfare in tune with ministry of agriculture and farmers welfare. This is very vital in present context. Your dinner sets should have minimum three fruits such mango, Graph and Banana. This goods dietary habits at home will makes everyone Healthy. Ministry of drinking water and sanitation: when we look at the fresh water available for drinking purpose is only 3% and 97% are

Remaining water are unsafe, salty and unfit for drinking. In North East India, Manipur is one such peculiar state having fresh water floating lake with Small Island. And floating island and is destined as tourists spot in and from people around the world. When we examined Ageing in the context of good news, a seed has to get mature and died so that a new sprouted one produce new buds give us a feeling of satisfaction i.e. it gives us back a hundred fold. For Instance a farmer planted a potato one bag, the potato gets decay and the old one is gone and the new shoot (leave) grows up in the main stem until harvest. we need to work hard and try to keep away from destroying by other animals. Secondly, the creation of 4 lane road i.e. National Highway in our country. The four lane mean Left Hand Side vehicles can moves to and fro. Similarly, Right Hand Side should also made possible two at a time to and fro. Such High the project cost will be heavy the road were destroy that were constructed some decade ago. Everything messing up, road are dusty, during rainy season vehicles are dancing up and down. There are lot of pot hole on the main National Highway.

<sup>vi</sup>Explanation of Harrod model say natural growth rate, actual growth rate and warranted growth. I would argue actual growth rates that makes a steady equilibrium growth in the economy.

<sup>vii</sup>**Actual Growth Rate:** It is denoted by G, this is brought above by saving and capital supply ratios. This two inputs are responsible for cyclical changes in the growth rate.

So,  $G = Y/Y$ ,  $\Delta y$  depicts change in income and  $y$  is total Income.

Actual growth rate is determined by two factor viz. saving income ratio and Capital output ratios.

$$GC = S$$

Where  $G$  actual rate of growth  $\Delta Y/Y$ ..... (1)

$C =$  Capital output Ratios  $\Delta K/Y$ ..... (2)

$S =$  Saving Income Ratios  $S/Y$ ..... (3)

Substitutes (1), (2) and (3) in the main actual growth rate formula we do have,

$$\Delta Y / y = K / Y = S / Y, \quad (\text{since } K / y = I / Dy)$$

$$I / Y = S / Y$$

Removing denominators of from LHS and RHS, we get final outcome  $I = S$ . the direct and indirect application is that bringing up children is one way of saving that investment principal which becomes a nation builder and greater height of economic growth of a nation fall upon the children who grows up and become a part of workforce that pull up static and dynamic equilibrium. Old age people can promotes younger generation in term of formal and non-formal counselling. Every race have their own culture, food and shelter, story of their own to tell, In a vast

country like India there is many diversity and mother tongue and tribes, general, scheduled tribes, schedule caste, and other minority. Nevertheless, we have one Prime Minister

And one President and one currency. Let us hope that our grandma and our grandpa will bless us for our future forthcoming. Saving is a function of income, investment is a function of income. Therefore, we figure out saving equal investment with respect to income is to be remember. Children population increases then it implies persistent supply of labour remained positive, working population are thinly spread in rural area whereas it is widely spread in cities and town of this present phenomenon (22<sup>nd</sup> millennium). City are densely populated due to migration of people from rural to urban areas. The reason for migration to city are many it happens because of high wage in urban areas, in contrast only subsistence wage are provided in rural areas. Some went out for getting good education after completion of degrees like Ph.D and searching for Job, having getting the job started to reside in urban areas until retirement or when more persons from same family after getting jobs made a permanent settlement in those state where they got their jobs. In case of ageing (old age) the role of old people toward growth is virtue cycle it deal with morality, discipline, respect for others, high standard of living, ethical values and have many dexterity say humbleness, kindness, grace, politeness and mercy with fat income toward others. In contrast cycle of poverty goes in this loop say great grandpa was a farmer and so do young grandpa did the same Job. The productivity of land goes out. So the consequence of soil infertile making them become poor. <sup>viii</sup>In The same manner father is poor and children becoming drop out and no longer in constructive path (education) but fall trap to poverty cycle since food production grows in Arithmetic Progression i.e. 1, 2, 3, 4, ..... n times and population expand by geometric progression i.e.  $1^1, 2^2, 3^3, \dots, n^n$  times as per Robert Malthus. To make a country strong for instance Late President APJ Abdul Kalam could have spread his knowledge and wisdom to co-worker and making them substitute to handle (know-how) in the anal of Indian Space Research Organisation (ISRO) for our country. By way of actions and thought for greater height of the country. Centrifugation of children are drivers of growth when the child grow up and joined workforce in three sector of the economy primary sector, secondary sector and tertiary sector. Finally when children are more it can trained them up and contribute to Gross <sup>ix</sup>National Product GDP or National income. The Gross national product refer to all those goods and services per annum (per year) that is converted in monetary unit plus Indian resident earning in other country and take away money earn by foreigner living in our country. Most preferably ageing need thin demographic profile just because they are no longer productive. On the other hand children when train them up in a way not to hurt others, and they will do so. In any country workforce together with bulging influx of industry, machine replace human work. The age of information, communication and technology (ITC), we must be able to segregated right information, or fabricated reports, all type of note are putting up in internet this should be verify for our class room discursion. In short it can be said that ageing is something like going down with downstream of a river and shall come no more. But for the children, they mess up and fight up with current of a river that flow down and moves upstream to face any consequence. The collar is obtain when a child is grown up but

this achievement lies on the love and care and must be happy Family. Poverty and unemployment is just an opportunity to go and hunt for real talents God gave for each one of us. The Old aged (ageing) waiting for exit out of this world. But the children is a God gift, we must love both girl child and boy child alike. For instance, if population of a girl child is 600 and boy child is 400 here there is lest conflict. But when male population stood at 700 and girl child is 300, this show the presence of conflict in order to get marriage. In such a situation there is friction and chaos over some beautiful girl. In such a situation, say one girl is being proposed by 6-7 male, if she say yes to all of them. This will give rise to entangle among Youngman's thatmight give rose to a class of battle among men.

The girl child should be protected and are equally and treated with equity, like the enjoyment and freedom which are enjoy by the boy child where women's empowerment is still and unfinished dream. Today work force need dexterity, must know how to handle machinery, tools and equipment and business environment and top extra-ordinary people are our (late) president A.P.J. Abdul KalumAazad., the then p.m. Modi, Mrs Latamangeskar, Ms NehaKakkar, Mary Com( the Iron lady of Manipur), Ambani brothers , mssharmila Tagore. Ms AashaBosle.

Mr.Reman , P.T. Usha, mr.UditNarayan such people passes their live expedition as in tune with the phenomenon of same sunshine, same rain , same plain and same hill and reached their own destiny. These ^people are just Rs one from Rs1000. Whatever, talents of one self is mainly subjectivity. You must throw your study (burning mid night oil)sacrifice your best time in reading, forget about your love bird, when you are bore reading too many things and make a strong commitment.Despite of love birds we must not married until and unless our vision are achieved. Whatever it is, "a sound mind in a sound body" to maintained goods health we must live on goods diet mainly green leafy vegetables, reddish, carrot, beans. Pumpkin, mushroom from forest, meat, fish, piggeries, chicken, cow, buffalo, and mithun and along with sea fish and from ocean. The flora and fauna of planet

earth is for the consumption of humankind. I am not talking about things that goes inside our body but also with respect to use of tress for construction of house and cement and brick for permanent and good apartment.

The role of children by reviewing Human Resources in India

By the term human resources we are trying to bring in efficiency, educational quality, productivity, organisation ability skill and far sightedness. Children used the scarce resources very carefully when their parents did not make their path so free but pressingahead with greater dream for them. They can be mould in any type of people for instance tyre can be used for tatashaktiman, buses, Scorpio etc. Increase productivity when children are ask to increase the time of hour spent for studying, hard work never goes wasted he comes out with flying colour. Development of Skills, if we are to be typist we need to learn when we were small but after grown-up we not be able to do so. Skills implies multi-facet talents for e.g. worker two wheeler, four wheeler, and body of train (bogies) and aircraft industry. Teenages have been given jobs in most tourists place where good hospitality, making of taste best in whatever items that the foreigner or Indian residing other state.

There are four stages of demographic transition in the theory of population Stage 1: Birth rates are above death rates which pushed economy. At the same time the death rates are more since they are kept away too old aged home where they felt gloomy missing their nephew and niece. Second stages of demography transition are both Birth rates and Death rates are declining due to scientific progress and advancement of the Nation. During second stages death rates is steeper than that of birth. And in the four stages like in first stages the fourth stages shows us that birth rate is higher than death rates, because life has to go through up and down till 25 years to 35yrs. And jobs seeker are widespread across country within and outside India that is scientific reason for marriage. But in the hill many drop out after class seven to class 12, and that lead to early marriage.

[1] Four Stages of Demographic transition			
[2] Stage 1 [3] A.	[4] Stage 2 [5] B.	[6] Stage 3 [7] C [8]	[9] Stage 4 [10] [11] D

[12]	[20]	[28] Birth rates	[29]
[13]	[21]		[30]
[14]	[22] <b>Populatio</b>		
[15]	[23] <b>n.</b>		
[16]	[24]		
[17]	[25]		
[18]	[26]		
[19]	[27] Death Rate		

The girl child in the present scenario, Girls are trying to make equal with male whose counter path 'empower of human being'. The last thing there is softness and humbleness in their heart. Suppose for a petty issue not reading daily mom and dad used to thrust them crying for few minutes the child will get back to the normal mood, play and talk with her mom and dad without any condition which mean unconditional love for parents. Children love for Daddy and mummy is unconditional When Jesus had cross the river many crowd according to <sup>xi</sup>Good News Jairus fallen at his feet and said, "My daughter is at the point of dead "please come and lay your hand so that she would live again. After hearing the news asked him to take him the girl child already before he reached people crying and he told them that the girls are just sleeping in such a place of commotion Jesus and his few disciplines along with the parent brought about big miracles. He spoke out a sentence 'tale ta Kum'' which means little girl get up and immediately, got up and working around all who witness this remain perplex over the divine work of God.The role of ageing (old people)there was a saying long age and no more in the present days i.e. some book are to be tasted, others to be swallowedand some to be digested these concepts are given to us by Bacon.The role of ageing toward community, statehood and nation and as a whole.Ageing is a protocol whereby all humankind will get exit and left our soul for nether world. The world of soul who is worthy enough to God who had created Heaven and Earth.The ageing say pre-ageing can be fitted for the age group say 65 year to 80 year, ageing could be considered as 80 year to 100 year and post ageing have attach with 100 year (one century upto130) We could not overlook pre-ageing people they have strong mind, strong body and their head is full of story to tell their life time experience in whatever form they earn money to run and kept alive the family. For instance from a singer family produce another singer, from a farmer's family produce more farmer as I have discuss above the virtue cycle as well as vicious cycle of poverty. New pensioned people say Indian army can be recruited back at the times of emergency for they are trained and skill in warfare. And teacher too after retirement can write textbook in whatever speciality they get. If family are not rich Private tuition both for Art and science are reeling and streaming everywhere but we must not compromise and ensure the capacity and ability up to the urge of the students in greater perspective.We may be given the post of chairman ship, we are asked to give exaltation speech in a programme like Republic Day Celebration or an Independence Day celebration, Christmas celebration and New Year etc.

Without the present of elders, old people, the village seems to be void and empty. In any meeting with respect to village like village fund, taxes from those who are opening some store and enterprisein Nungba one and Noney of Manipur and big bazaar(Godi Mall), V2, City skart, and Vishal Mate. Out here in silchar. Old age is still productive and can be reused but post ageing they are childlike in their way of living dependency, when we give them morning meal, he might be gossiping he is not yet getting morning meal. We all enter into this world nothingness and will exit with nothingness. But we can store up our wealth in nether world were no mote destroy our wealth whereas how much wealth we have it would get destroy by mote. Willingness to get into any platform for the good of student wing, youth conference, becoming a brain storming citizen enlightening to go for positive competition and caption not to destroy human being like that of tea glass for a petty issue.It took lot of many year to get white collar Job say 30 year to35 year for tribes living in the periphery of the country. But within minute we can take life and to recreated human being is at the will of God. It is our moral duty to respect an old people alike without caste and creed. All the countries around the world comprises of children, working force, and Ageing. Infantry encourage for they will moves into work force, work force should be skill and very hard working well equipped to handle all modern machinery, tools and equipment. Ageing should be reused, their standard of living must not compromised before retirement and after retirement. They should stay by some saving put up for the old age. Finally they must pray for taking his soul to nether world. Where God the father, God the son and all holy spirit, angels, holy spirit, all queen, all holy people like human was created and in their heart a piece of God 'heart is encrypt in it. For instance Abraham, Noha and Isaac etc. The son kept and send to the world with some talents or in unpleasant manner. People who crust such positive and negative realm of life are given place in heavenly abode.<sup>xiii</sup>United Nation International Fund forChildren (UNICEF), According to UNICEF, every 66 seconds new born babies dies in India. Therefore, we should ensure all the babies come into this world gladly and their life should be protected the dead rates 66 child's dying every second would mean we compromise baby death by lack of tools and skillness. If this trend go on parents would not be happy with one child norm. My heavenly Abba Father I thank thee for a real father for me in nether world. The woman from earth whom, Abba father got marry is my real mother. In the good news, it is mentioned that you shall not call anybody father on earth for your father live in

heavenly realm. I thank thee for providing security, protection, forgiving my sins and encourage to work hard since I was class three. If I go to my friend house for Christmas meal or New Year dinner. Old age people gave advice and counselling, that is made for their family. But I took the right counselling and removes the bad one. My Uncle Gold medallist in history, finished Doctorate under one prof. who loves him. Jesus I thank you for giving me a helper since I was a childhood thanking you my father in other world for removing TB, preserved my life from big and small accident, protecting me from JNV Jeep, when I was taking (crossing) mayailambi, I look vehicles coming from left size and from right size dasing at a speed of 40 to 50 speed per km. I also fly out to cruse my two wheeler by bus. Such protection involved the father who live in nether one. There are two kinds of daddy as

my personal observation. A dad who love his wife and children in good times and bad times. There are dad who goes wild after wine and simply beating up and spoil the utensil. Another colour of broken family who don't believes in the existent of God. Wife getting suspicious when dad goes out for office. The husband also get suspicious on wife during office hours. Some husband go on continuous to his wife when wife has no longer impulse. Some wife commit suicide.
